

GURNOOR SINGH

Full-Stack Software Engineer · Blockchain & Smart Contract Developer

gurnoor.singh@iiitg.ac.in | github.com/terabyte-trifler | gurnoorsingh.vercel.app

Nationality: Indian | Visa Status: Applying from outside UAE — open to relocation, immediate joiner

Languages: English (Professional) · Hindi (Native)

PROFESSIONAL SUMMARY

Full-stack and blockchain software engineer with 3+ years building and shipping scalable web applications and secure on-chain systems. Protocol-level experience in Rust and Substrate (pallets, chain extensions, Ink! and Solang) alongside full-stack development across React, Next.js, TypeScript, Node.js, and Solidity smart contracts. Proven ability to own systems end-to-end — from runtime and architecture through testing, deployment, and release. IIIT Guwahati Computer Science graduate seeking a blockchain or full-stack engineering role in Dubai.

TECHNICAL SKILLS

Languages: Rust, TypeScript, JavaScript, Python, Solidity

Frontend: React, Next.js, Vite, HTML5, CSS3, TailwindCSS, responsive UI design

Backend: Node.js, Express, REST API design, MongoDB, PostgreSQL, SQL, MERN stack, authentication & payment integration

Blockchain / Web3: Rust, Substrate (pallets, chain extensions, runtime), Ink!, Solang, Solidity, EVM, smart contract development, Hardhat, ethers.js/web3.js, ERC-20/721, DeFi (lending, staking, yield vaults), Solana, OpenZeppelin, contract security & testing

Engineering Practices: Git, CI build pipelines, test strategy & automation, integration & regression testing, distributed-systems architecture, technical documentation, Agile delivery

PROFESSIONAL EXPERIENCE

Rust / Substrate Developer | Laguna Labs

Jan 2026 – Present · Remote

- Developed a **system-contract-deployer pallet** managing access control to privileged special contracts on the Laguna chain.
- Improved Solidity contract support on the Laguna chain, broadening the range of contracts the runtime can execute natively.
- Built **chain extensions** to expose native runtime features to the contract layer, supporting both Ink! and Solang-compiled Solidity contracts.
- Worked at the Substrate runtime level in Rust, bridging on-chain contract execution with core protocol functionality.

Founder & Lead Engineer | Phylanx (Distributed Trust Protocol)

2024 – Present

- Architected and shipped a multi-component distributed protocol end-to-end — **on-chain programs, a 5-node oracle cluster, an indexer, a REST API, and a TypeScript client SDK** — owning design, implementation, and release.
- Built the on-chain layer in **Rust (Anchor/Solana)** with a full verification workflow (build → typecheck → test → sign-off), backed by a 1,327-case automated suite spanning unit, integration, and fault-injection tests.
- Engineered a REST API and indexer service achieving **p95 read latency of 3.2ms** and mean consensus of 6.3s per epoch, tracked release over release to catch regressions.
- Designed Byzantine fault-injection and chaos scenarios (1,000-certificate chaos runs, deliberate node-deviation cases) to validate consensus under adversarial failure, plus a watchdog that flags and excludes deviating nodes.
- Authored the architecture and technical documentation that kept a cross-functional effort aligned and shipping without rework.

Full-Stack Developer (MERN) | Cognizant

2022 – 2024

- Built and shipped full-stack web apps on the **MERN stack** — REST APIs in Node.js/Express, data in MongoDB and SQL, and React frontends built against them.
- Designed backend services and database schemas focused on query performance, data integrity, and clean API contracts for downstream consumers.
- Treated test coverage and peer review as release preconditions, applying defect-prevention discipline appropriate to high-stakes financial systems where an unverified path means irreversible loss.
- Authored technical specifications and API documentation that translated complex requirements into clear, reviewable references for engineering and cross-functional stakeholders.

Founder & Technical Lead | Blockchain Education Community

2022 – Present

- Built a 50+ member technical community and delivered **20+ workshops** on blockchain protocols, smart contract security, and developer tooling; authored reference guides that cut repeat questions by **40%**.

EDUCATION

B.Tech, Computer Science | Indian Institute of Information Technology (IIIT) Guwahati · Blockchain & Distributed Systems
